

Maintenance Care Instructions Sheet

CERAMIC COATING

Table of Contents

<u>Page 1</u>	Glass Clean
<u>Page 2</u>	Epic Clean (Waterless Wash)
<u>Page 3</u>	Power Foam (Cars and Trucks)
<u>Page 4</u>	Power Foam (RVs)

IMPORTANT: Throw away microfiber towels after one use. Ceramic hardens to the surface and if material is used again, it WILL scratch the surfaces you work on.

THE 2 MINUTE RULE: When working with any of the Sensha products listed in this sheet, BMCC recommends utilizing our 2 minute rule. Do not let product sit on a surface for longer than 2 minutes as this could cause a build up of ceramic on a particular spot.

Glass Clean

Purpose: Use on all windows and other glass surfaces as frequently as you deem necessary. Also great for spot treatment such as bird poop and pollen droppings.

- 1) Spray Glass Clean directly onto glass.
- 2) We recommend that you use a microfiber towel folded in half twice to wipe and dry the glass. Remove any tags or excess materials from the towels before use. These extraneous materials will cause scratching!
- 3) With a dry towel wipe the wet surface gently with not too much pressure before the surface begins drying.
- 4) Repeat this process as necessary as the surfaces of your vehicle get dirty. You may use this procedure on both the outside and inside of your windows.
- 5) For spot treatment on painted surfaces, spray once on area then wipe extremely gently with microfiber towel. Continue this step until area is clean, one spray and one wipe at a time.

Epic Clean Waterless Wash

Purpose: For quick everyday cleaning, BMCC recommends an Epic Clean waterless wash once a week for cars/trucks/nosecaps, and for any everyday spot treatment. Use often on trailer front caps, usually once before a trip and then once after you reach your destination.

- 1) We recommend that you use a microfiber towel folded in half twice to wipe and dry. Remove any tags or excess materials from the towels before use. These extraneous materials will cause scratching!
- 2) Lightly mist Epic Clean directly onto microfiber towel one to two times while facing away from vehicle. To mist hold towel roughly 6-8 inches from spray nozzle.
- 3) Working in sections, run the dampened towel very gently over the surface of the vehicle going with the edges of the vehicle, never against them. On front caps wipe like you are reading a book.
- 4) Using a separate dry towel, or turning the towel over to a dry side, wipe with the same amount of pressure once more over the same area.

Power Foam (Cars & Trucks)

Purpose: 3-month durability washing and coating, BMCC recommends a Power Foam wash once every month, after long trips, and after any weather storms.

- 1) Begin by hosing down your vehicle.
- 2) For this process, work in sections (example: driver's side door). We suggest using a lambswool wash mitt as your washing tool.
- 3) Before using the Power Foam, dampen the wash mitt with water. Then add one cap full, or 8-10 sprays if spray nozzle, (10mL) spread across the lamb's wool mitt and lather it up to produce as many suds as you can. (Note: The Power Foam soap does not create as many suds as standard soap.)
- 4) Gently wash each section of your car with your dampened mitt. Once that section has been washed, hose it down with water, and move to the next section. When you notice the suds disappear on the mitt either a) re-lather or b) add another half cap to the mitt. Repeat this step until the job is done.
- 5) To dry your vehicle, we recommend using a leaf blower. Yes, a leaf blower. If no leaf blower is readily available, microfiber towels work well too.
- 6) Clean your lamb's wool mitt after each wash with the direction provided by the label on the packaging you received it in.

Power Foam (RVs & Trailers)

Purpose: 3-month durability washing and coating, BMCC recommends a Power Foam wash once every 2-3 months, after long trips, and after any weather storms.

- 1) Begin by hosing down your vehicle.
- 2) For this process, work in sections of 5 square feet. Spend extra time working on your front cap. We suggest using a lambswool pad attached to an extendable pole as your washing tool.
- 3) Before using the Power Foam, dampen the wool pad with water. Then add one cap full, or 8-10 sprays if spray nozzle, (10mL) spread across the lamb's wool pad and lather it up to produce as many suds as you can. (Note: The Power Foam soap does not create as many suds as standard soap.)
- 4) Gently wash each section of your car with your dampened wool pad. Once that section has been washed, hose it down with water, and move to the next section. When you notice the suds disappear on the mitt either a) re-lather or b) add another half cap or 4-5 sprays to the mitt. Repeat this step until the job is done.
- 5) To dry your vehicle, we recommend using a leaf blower. Yes, a leaf blower. If no leaf blower is readily available, microfiber towels work well too.
- 6) Clean your lamb's wool mitt after each wash with the direction provided by the label on the packaging you received it in.
